

GOH Pick Module Installation

Headzup Inc.

BACKGROUND

This project original came to us by-way of referral from another happy customer. The client was dealing a sales forecast that would not be accommodated by their recently-installed GOH storage system.

After an initial viewing of their current space, and a detailed understanding of their business expectations and how best to engineer the warehouse to handle all of the requirements, we submitted a detailed design to the client that made excellent use of the warehouse's vertical space.

Our team impressed the client with a robust, detailed design along with intimate knowledge of the system we had crafted. They appreciated our commitment to short lead times at every stage of the project and ultimately with our ability to execute on aggressive timeline and complete the project on schedule.

► Project Details:

Warehouse Design, Structural Engineering, Permit Expediting, and Installation.

- Implemented over 2 Phases
- 141,000 square ft x 3 levels
- 110,000 LF of Stock Rail
- 6 Vertical lifts
- 9 staircases

THE PROJECT

► Timeline:

We committed to a timeline of 16 weeks to engineer the structure, supply the materials, install the pick module, and get the town to approve it for use. We finished two weeks ahead of schedule.

► Outcome:

The client was completely satisfied with the build-out of the Phase I. Additionally, the customer was pleased with our quick turnaround and install and they decided to evaluate further automation enhancements for other parts of their warehouses and requested that we lead the initiative in assessing opportunities for improvements that would help the client make more functional and efficient use of their material handling operations & facilities.

► Moral of the Story:

While Headzup is not the ideal candidate for your project in every instance, typically we can present the best proposal for your project, taking into consideration all of the little details (and risks) that can often go overlooked [by our competitors].

Since every job has a degree of complexity, we can't foresee every complication that might compromise a customer's established timelines. However, Headzup is resourceful and adaptable enough to find alternate solutions to unexpected obstacles. In situations where a viable solution doesn't exist, you can always expect candid communication from our project management group. We're here to support your business in whatever capacity we can and to do right by your operations team. You can always count on us to tell it to you straight.

Call our Business Solutions team to determine if Headzup can be a good partner for your next warehouse project.
